

This document describes the original flow for automated combat. The current version (for Song of Heroic Lands) will differ somewhat, but the same concepts and general design should apply.

The user begins during combat by selecting a specific strike mode to use. The following dialog box appears:

Char1 vs. Char2 Attack with Bastard Sword X Close

Weapon Aspect: Edged (7) ▾

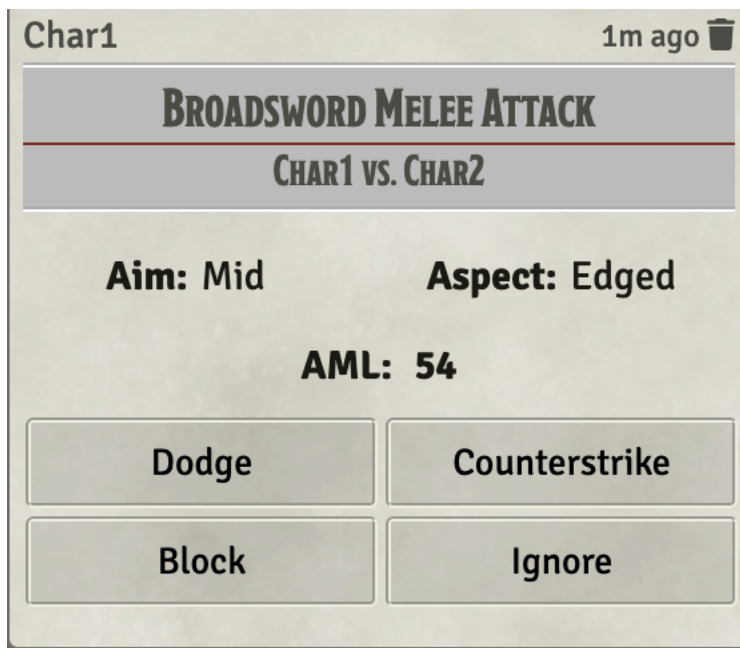

Aim: Mid ▾

Additional Modifier: 0

✓ Attack

In the case of SOHL, Weapon Aspect will be determined by the strike mode, so that won't appear. Aim will represent the body part that is being targeted. Then they click "Attack".

The following chat box is displayed in the chat window:

Char1 1m ago

BROADSWORD MELEE ATTACK

CHAR1 vs. CHAR2

Aim: Mid Aspect: Edged

AML: 54

Dodge Counterstrike

Block Ignore

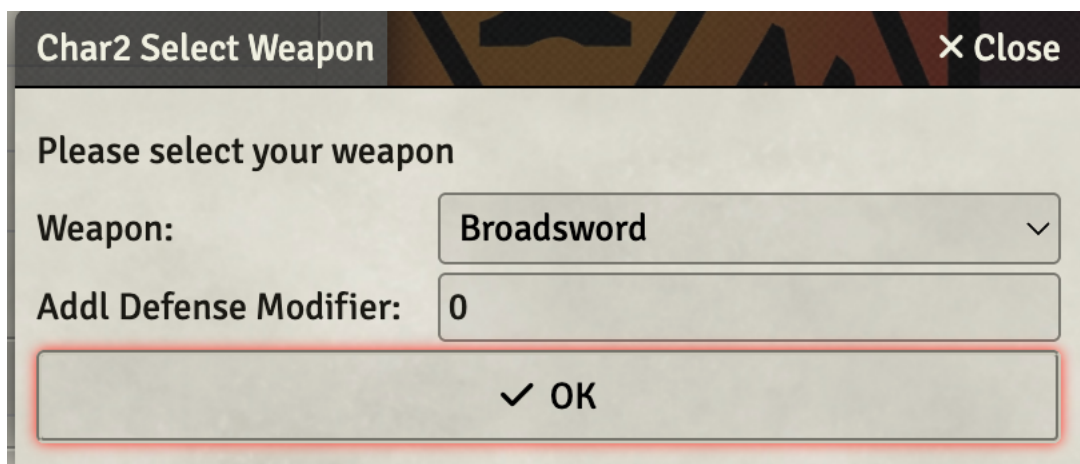

The upper right shows that the speaker is "Char1". The title is Broadsword Melee Attack, with the attacker and defender noted. The card shows all of the information that was

selected on the dialog box, so that everyone is aware of the parameters of the attack (and there is no question of cheating).

The buttons are displayed differently on each client depending on ownership of the player. Any player who has OWNER permission on Char2 (the defender) gets to see these buttons; all other players have these buttons hidden. This is handled during chat card rendering.

The defender has four choices of how to defend: Block, Dodge, Counterstrike, or Ignore.

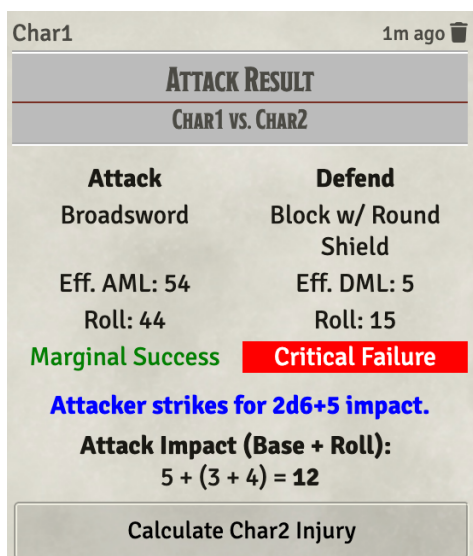

Assume the defender chooses the “Block” defense. Then the player receives the following dialog:

A dialog box titled "Char2 Select Weapon" with a "Close" button in the top right corner. The main text says "Please select your weapon". Below this, there are two input fields: "Weapon:" with a dropdown menu showing "Broadsword" and a checkmark icon, and "Addl Defense Modifier:" with a text input field showing "0". At the bottom, there is a large button with a checkmark icon and the text "OK". The "OK" button is highlighted with a red border.

In the case of SoHL, you will select the Strike Mode to block with rather than the weapon. Add any modifiers, then press OK.

The following shows the result of the Block defense:

A dialog box titled "ATTACK RESULT" with a subtitle "CHAR1 VS. CHAR2". It shows a comparison between an attack and a defense. The attack is "Broadsword" with an effective AML of 54 and a roll of 44, resulting in a "Marginal Success". The defense is "Block w/ Round Shield" with an effective DML of 5 and a roll of 15, resulting in a "Critical Failure". The attack impact is calculated as 5 + (3 + 4) = 12. At the bottom, there is a button labeled "Calculate Char2 Injury".

Attack	Defend
Broadsword	Block w/ Round Shield
Eff. AML: 54	Eff. DML: 5
Roll: 44	Roll: 15
Marginal Success	Critical Failure

Attacker strikes for 2d6+5 impact.
Attack Impact (Base + Roll):
5 + (3 + 4) = 12

Calculate Char2 Injury

Here we can see the whole result of the combat. Both the attacker and defender results are shown together. We see what the strike modes are, what the final computed Attack Mastery Level (AML) and Defend Mastery Level (DML) are, what the roll was, and the results of the roll. In this case, it shows that the attack impact is 2d6+5. A 3 and 4 are rolled, so the total is 12 impact. The Defender will now see the button “Calculate Char2 Injury” (note: so will the GM, so it is important to ensure the token name is part of the button label).

The case of Dodge is similar, but no dialog box is needed:

Char1		8s ago 
ATTACK RESULT		
CHAR1 VS. CHAR2		
Attack	Defend	
Broadsword	Dodge	
Eff. AML: 54	Eff. DML: 5	
Roll: 87	Roll: 31	
Marginal Failure	Marginal Failure	
Attack misses.		

The situation with Ignore is even simpler, since the defender takes no part: again, there is no dialog for the defender:

Char13s ago

ATTACK RESULT

CHAR1 VS. CHAR2

Attack	Defend
Broadsword	Ignore
Eff. AML: 54	—
Roll: 54	—
Marginal Success	—

Attacker strikes for 3d6+5 impact.

Attack Impact (Base + Roll):
 $5 + (1 + 3 + 5) = 14$

Calculate Char2 Injury

The one unusual situation is counterstrike. The counterstrike defense is in fact another attack instead of defending. So this result is treated as two separate attacks, one for the

attacker, and one for the defender: two cards will display.

Char11m ago

ATTACK RESULT

CHAR1 VS. CHAR2

Attack	Defend
Broadsword	Counterstrike
Eff. AML: 54	—
Roll: 29	—
Marginal Success	—

Attacker strikes for 1d6+5 impact.

Attack Impact (Base + Roll):
 $5 + (2) = 7$

Calculate Char2 Injury

Char11m ago

COUNTERSTRIKE RESULT

CHAR2 VS. CHAR1

Attack	Defend
Broadsword	—
Eff. AML: 83	—
Roll: 12	—
Marginal Success	—

Counterstriker strikes for 1d6+5 impact.

Attack Impact (Base + Roll):
 $5 + (5) = 10$

Calculate Char1 Injury

In this case, both the strike and counterstrike hit, so both parties take damage. Note that the player for Char1 will see the counterstrike “Calculate Char1 Injury” button but not the “Calculate Char2 Injury” button, and vice versa.

Finally, once the “Calculate XXX Injury” button is pressed, the final injury details are calculated and any injuries are automatically applied to the character:

Char16s ago

LEFT SHOULDER INJURY

CHAR2

Aim: Mid

Aspect: Edged

Armor Layers

None (0)

(prot):

Eff Impact:

$12 - 0 = 12$

Injury Level:

S3

Injury recorded on character sheet

NOTE: Make a Fumble roll

Fumble Roll

Shock Roll

This indicates that the result was a Left Shoulder Injury to Char2. There was no armor there, so no reduction. Effective Impact is 12, which results in an S3 injury. Because it is a serious injury to the arm, a fumble roll is called for. And due to the magnitude of the injury index, a shock roll is required as well.
